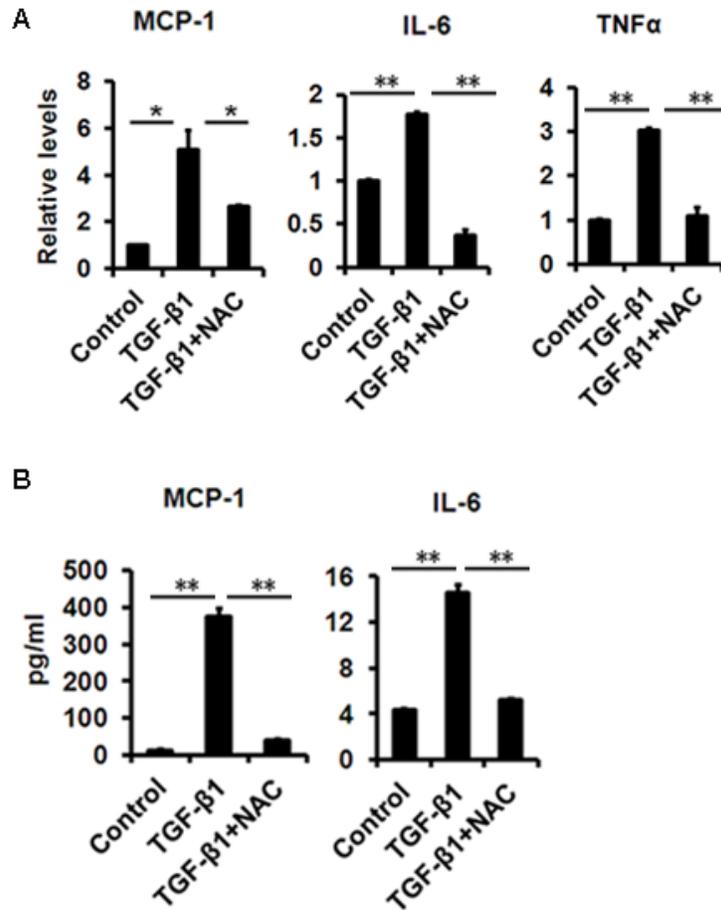

Figure S1. Effects of TGF-β1 on SASP production. (A) mRNA expression was measured by RT-qPCR in CE cells upon treatment of 10ng/ml TGF-β1 for 72h. (B) The MCP-1 and IL-6 in cultured CE cells supernatants were detected by ELISA. * $P < 0.05$, ** $P < 0.01$. All the experiments were independently repeated at least three times.
