

Table S15. NetworkAnalyst-based Gene Ontology analysis of the RXFP3 interactome stabilized in the presence of CPT cellular perturbation (generic database). The proteins consistently associated with the RXFP3 receptor following exposure to CPT were analyzed using a generic human tissue database derived from IMEx (<https://www.imexconsortium.org/>). For the most stringent analysis process we employed a Zero Order Network approach. Gene Ontology (Biological Process) annotation was performed on all identified nodes using the built-in Gene Ontology analysis module of NetworkAnalyst (www.networkanalyst.ca). For each significantly-populated Gene Ontology term group ($p < 0.05$) the total number of proteins associated with that group (Total), the expected (Expected) number of identified proteins from a random data sample (Hypergeometric test based), the actual number of GO term-populating proteins from the experimental dataset (Hits), the enrichment P value (P.Value) as well as the enrichment FDR are given (FDR).

GO Biological Process Term	Total	Expected	Hits	P.Value	FDR
MRNA metabolic process	817	9.26	72	1.78E-46	1.46E-43
Protein targeting to membrane	158	1.79	39	5.72E-42	2.35E-39
Cellular protein complex disassembly	160	1.81	38	3.56E-40	9.15E-38
Translational initiation	205	2.32	41	4.46E-40	9.15E-38
Protein complex disassembly	167	1.89	38	2.12E-39	3.48E-37
Cellular macromolecule catabolic process	849	9.63	65	1.29E-37	1.76E-35
Macromolecular complex disassembly	189	2.14	38	3.44E-37	4.03E-35
Viral reproduction	803	9.1	63	5.82E-37	5.96E-35
