¹Data of menopausal status were obtained via self-reporting at PURE baseline, not at QCT measurement.

²Mild, moderate, severe fracture were combined defined as fracture prevalent and no fracture.

³Three categories were defined as moderate/severe fracture, mild fracture, and no fracture.

⁴Adjusted for age.

⁵Adjusted for age, education level, BMI, waist circumference, tobacco use, alcohol consumption, and physical activities.

Supplementary Table 3. Sensitivity analyses for vertebral fracture with calcium intake among women by age groups.

Calcium intake from food	Fracture risk % (n)			Dichotomous odds ratio (95% confidence interval) ¹			Ordinal odds ratio (95% confidence interval) ²		
	No	Mild	Moderate or severe	Crude	Adjusted ³		Crude	Adjusted ³
