

SUPPLEMENTARY FIGURE

Supplementary Figure 1. Amphotericin B is involved in cisplatin resistance in human chondrosarcoma cells. Chondrosarcoma cell line (JJ012 cell) was treated with various concentrations of exogenous recombinant amphotericin B (AR) for 48 h, and then treated cisplatin (30uM) for another 24 h. Cell viability was examined by MTT assay. * $p < 0.05$; # $p < 0.05$ compared with cisplatin-treated controls.
