

SUPPLEMENTARY FIGURE

Supplementary Figure 1. Overexpression of hsa_circ_0048179 upregulated the expression of GPX4 in HepG2 cells. (A) HepG2 cells were transfected with hsa_circ_0048179 for 0, 24, 48 and 72 h, and then exposed to oleate/palmitate (2:1 molar ratio) for another 24 h. Levels of GPX4 expression in HepG2 cells were detected with western blotting. (B) Relative expression of GPX4 in HepG2 cells was quantified by normalization to GAPDH. **P<0.01 vs. control group.
