

SUPPLEMENTARY FIGURES

Supplementary Figure 1. The effect of NaHS treatment on yeast cell growth. Yeast cells (BY4742 background) were treated with or without 100 μM of NaHS at 24 and 48 hours after inoculation as indicated as arrows. Biomass growth was measured at OD₆₀₀.

Supplementary Figure 2. DEGs common in both the early and late NaHS treatments. (A) Heat maps of similar behaving DEGs. **(B)** Heat maps of opposite behaving DEGs.
