

SUPPLEMENTARY FIGURE

Supplementary Figure 1. Inhibition of mitophagy promotes apoptosis. PINK1 was knocked down by PINK1 siRNA in MDA-MB-231 cells. After treatment with 20 μ M warangalone for 12 h, Annexin V-FITC/PI assay was used to detect the apoptosis rate. One-way ANOVA was used for statistical analysis ($n \geq 3$). * $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$ compared to the respective control group.
