

SUPPLEMENTARY FIGURE

Supplementary Figure 1. Survival analysis of three target genes of Baiying Qinghou decoction using a TCGA dataset. The optimal cutoff value of each gene was calculated to stratify all patients into high- and low-expression groups (left). BCL2 (A), MPO (B), and PTGS2 (C) all were not related to the prognosis of HNSCC patients ($P > 0.05$; right). Abbreviations: HNSCC: head and neck squamous cell carcinoma; TCGA: The Cancer Genome Atlas.
