

SUPPLEMENTARY FIGURES

Supplementary Figure 1. The γ -OHPdG levels and prediction of prognosis in adjacent tissues. (A–C) Kaplan-Meier survival curve analysis shows OS, PFS and MFS rates of high and low γ -OHPdG levels in adjacent tissues, respectively. **(D–F)** Time-dependent ROC curve analysis of the γ -OHPdG levels for OS, MFS and RFS.

Supplementary Figure 2. Comparison of the levels of γ -OHPdG in the cirrhosis tissues advanced to HCC and not advanced to HCC.
