

**SUPPLEMENTARY FIGURE**

**Supplementary Figure 1. Comparison of viabilities of untreated control PANC-1 cells inside or outside the incubator during TC-HT treatment (~45 min).** MTT assay was conducted to determine the viabilities of PANC-1 cells after 24 h incubation. Data were presented as the mean  $\pm$  standard deviation ( $n = 4$ ). N.S. denotes a statistically non-significant difference within the indicated group.
