Supplementary Figure 1. Validation of the accuracy of the ORGs risk score algorithm for predicting BCR probability of GSE70769 and GSE21034 datasets. (**A**, **B**) Kaplan-Meier curve analysis was used to analyze the BCR of patients with high and low ORGs risk score. Time-dependent ROC curves were used to compare the 1-, 3-, 5-year BCR between high and low ORGs risk score.
