

## SUPPLEMENTARY FIGURE

**Supplementary Figure 1. Quantile-quantile plots of A $\beta$ 42 levels.** Quantile-quantile plots of A $\beta$ 42 levels in HIGH group (A) and LOW group (B) showed approximately normal distribution. HIGH group = patients aged  $\geq 73$  at diagnosis, LOW group = patients aged  $< 73$  at diagnosis, A $\beta$ 42 = amyloid-beta 42.
